Innas has vacancies for 2 mechanical engineers.

We operate in the hydraulic industry. Our clients are hydraulic industries, manufacturers of mobile equipment, automotive, aerospace and off-shore companies.

Experience in piston pump design is not expected, but a strong belief that hydraulics can be strongly improved, is advantageous.

We prefer to work in multiple disciplines, covering a mix of design work, calculation and drawing, (FEM) analyses, but also testing & analysing of our products. But in case you are an expert in one of these fields, you are also welcome to apply.

We don't mind to try alternative technical solutions. We try to seek the most efficient and sustainable solutions, and in order to be

successful, these solutions also need to be better, technical and economical. In the end, we need to be able to sell our developments, for example by technology licensing.

In case you are interested in applying, please send a motivation and curriculum to Rob van Malsen, rvmalsen@innas.com, or call: +31 76 5424080.
